

Caelan Ross

Sherwood Park, AB (780) 554-8861 caelan.ross@gmail.com github.com/Caelan-Ross caelanross.netlify.app

Summary

Full Stack Developer with 4+ years of experience across Next.js, Typescript, C#, and SQL. Comfortable working across legacy and modern codebases, shipping complex features end-to-end with minimal oversight. Integrates AI tools into daily development workflows and maintains a self-hosted Linux infrastructure environment in production.

Technical Skills

- Languages: JavaScript, Typescript, Python, C#, Perl, SQL
- Frontend: React, Next.js, HTML5, CSS3, Tailwind, MUI, HTMX
- Backend: ASP.NET Core MVC, REST API Design, RabbitMQ, ODBC, IBM DB2 for i, MySQL, MariaDB
- Infrastructure: Proxmox, TrueNAS, ZFS, Docker, Docker Compose, Ubuntu Server, Linux, IIS
- Networking & Storage: SMB/CIFS, Pi-hole, NAS Administration, Hardware Troubleshooting
- Cloud & Backup: Rclone, Cloud Sync
- Dev Tools: Git/GitHub, ESLint, Visual Studio Code, Windows Terminal
- Practices & Patterns: Agile/SCRUM, Code Reviews, REST API Design, Micro-services, Reusable Components, Database Design, Automation
- AI-Assisted Development: GitHub Copilot, Claude, Claude Code

Education

University of Alberta – Diploma in Full-Stack Web Development
Dec. 2021 – Sept. 2023

Professional Experience

Full Stack Developer – First Canadian Insurance (Feb. 2024 – Present)

- Shipped 200+ features and bug fixes across a dual-stack codebase (Next.js/Typescript and Perl/CGI), consistently passing code review with minimal revisions.
- Wrote technical documentation for internal projects, cutting on-boarding time for new developers by 30%.
- Participated in SCRUM ceremonies and coordinated directly with stakeholders to manage delivery timelines and scope changes.
- Conducted peer code reviews focused on security, consistency, and readability across legacy and modern codebases.
- Built and maintained high-priority, customer-facing insurance tools under tight production deadlines, including full-stack features integrating IBM DB2 and RabbitMQ micro-services.
- Led the evaluation and internal roll-out of Claude Code; researched data safety controls, authored deployment documentation covering PII handling and access restrictions, and produced developer training guidelines for team-wide adoption.

Junior Full-Stack Web Developer – CreativeMITE (Mar. 2022 – Dec. 2023)

- Built full-stack features for hotel marketing websites using C#, ASP.NET, Next.js, and SQL, covering database design through to front-end delivery.
- Presented completed work directly to clients, gathered feedback, and iterated on solutions to meet evolving requirements.
- Managed Google Ads campaigns for hotel clients, analyzing seasonal trends to reduce cost-per-click by ~20%.
- Researched and recommended internal tooling adoption to reduce manual overhead in day-to-day operations.

Projects

Protection Product Cost Sheets – First Canadian Insurance (Internal)

- Eliminated manual PDF updates through reusable Next.js components, reducing update effort by 100%.
- Enabled real-time dealer pricing lookup via URL-based query selectors backed by SQL APIs.
- Built data parsers and field mappings to support 10+ product sheet variants.

Tech Stack: Next.js (TS), SQL, ESLint, MUI, VS Code

Pre-Authorized Credit Modernization – First Canadian Insurance (Internal)

- Designed 6 DB2 tables as value-definition lookup structures supporting a major schema overhaul, expanding a core table from 10 to 20 columns while maintaining backward compatibility.
- Built a dynamically generated popup in vanilla JavaScript for the legacy system, consuming internal APIs without any framework dependency.
- Developed an API endpoint for secure cross-origin internal content delivery using HMAC-based key pairs and request timestamps for authentication.

Tech Stack: JS, HTMX, SQL, REST API

Self-Hosted Homelab Infrastructure – Personal (GitHub)

- Deploy and maintain multiple Proxmox hypervisors running 5+ VMs and LXC containers hosting production-grade self-hosted services.
- Manage a TrueNAS SCALE deployment with ZFS RAIDZ1, SMB shares across ~16TB of storage, and automated cloud backup via Rclone.
- Diagnosed a hardware-level NIC instability bug (Intel I219-LM) by disabling offloading via bridge config, eliminating recurring network drops.
- Manage multi-service Docker Compose stacks including Jellyfin, Paperless-ngx, and Immich with persistent storage and NAS-backed volumes.

Tech Stack: Proxmox, TrueNAS SCALE, ZFS, Docker Compose, Ubuntu Server, Linux, Rclone, SMB/CIFS

Monthly Report Generator – CreativeMITE (Internal)

- Cut reporting time from 6 hours to under 5 minutes per cycle, saving \$1,500+ per month.
- Built automation to extract ZIP data, process Excel sheets, and populate Word documents.
- Aggregated analytics across 8+ hotel properties into structured tables and graphs.

Tech Stack: C#, VBA, Crazy Egg, Visual Studio, Windows Terminal
